Key Metrics

Total Loan Issued	Total Loan Amount Issued	Average Loan Amount Issued	Average Interest Rate %
39.72K	\$446M	\$11.22K	12.02%

- **Total Loan Issued (39.72K):** This metric shows how many loans the bank has given out. This means the bank is giving loans to many customers and is actively lending.
- **Total Loan Amount Issued (\$446M):** This metric shows the total amount of money the bank has lent out, giving an idea of how big the bank's loan business is.
- **Average Loan Amount Issued (\$11.22K):** This metric shows the average loan amount, indicating how much money people usually borrow from the bank.
- **Average Interest Rate (12.02%):** This shows the average interest rate that the bank charges on loans.

Explanation of each chart on the dashboard and the insights it provides

Grade & Sub-Grade wise Revol Balance

This chart sorts loans into grades from A to G, with sub-grades like A1, B3, and C5. Loans with higher grades (A and B) with sub-grade B3 and A5 usually have bigger balances, meaning these borrowers might owe more money. This could mean that more creditworthy customers are getting larger loans or using more of their credit.

State & month wise loan status

State	Status	Janu..	Febr..	March	April	May	June	July	Augu..	Sept..	Octo..	Nove..	Dece..

	Current	1,399	1,479	1,749	1,527	1,902	1,369	1,453	1,519	1,405	1,536	1,339	1,636

State & month wise loan status

This table shows the status of loans (Fully Paid, Charged Off, Current) for different months and states. It helps us see how loan repayments vary by location. For instance, if states like California (CA), Florida (FL), and New Jersey (NJ) have a lot of "Charged Off" loans, it might mean those areas have more credit risk. Looking at the trends over time can also show changes due to seasons or economic factors that affect how people repay their loans.

Verified Vs Non Verified Payment Status

Verified Vs Non-Verified Payment Status

This chart shows how much money was paid back by verified borrowers compared to non-verified borrowers. Since 59% of the payments come from verified users, it suggests that being verified might lead to more people paying back their loans. This highlights the importance of checking customer information to help manage risk.

Home ownership Vs last payment date status

RENT

18.90K

MORTGAGE

17.66K

OWN

Home ownership Vs last payment date status

The tree map organizes loans by homeownership status (Rent, Mortgage, Own and others) and how often payments are made. The larger sections show that most customers are either renters (18.9K) or mortgage holders (17.6K), while homeowners represent a smaller group (3K). The big difference in numbers indicates that renters and mortgage holders make up most of the customer base.

Year Wise Loan Amount

This chart shows how the total loan amount issued has changed over the years. There was a steep increase from \$2 million in 2007 to \$261 million in 2011, which means the bank was giving out a lot more loans during that time. This could be due to more people wanting loans. It might also reflect changes in the economy, such as financial crises, new rules, or how people were borrowing money.
